A note on publication venues: in my primary area of research, Human Computer Interaction, the ACM Conference on Human Factors in Computing Systems (CHI) is considered one of the best forums for dissemination of research results and covers the broad spectrum of research in Human Computer Interaction. The ACM Symposium on User Interface Software and Technology (UIST) is of similar quality, but is focused on a particular sub-area of the field, namely interactive techniques and devices. Papers in these conferences are refereed as full papers, and have an acceptance rate of around 15-25% each year.

BIO

Josh Urban Davis is a research based artist and engineer whose practice spans sculpture, filmmaking, projection, and site-specific performance and installations. He holds a BFA in studio art and BS in computer science as well as an MS in computer sciences and digital arts. Recent projects draw inspiration from speculative fiction to explore the relationship between emerging technologies, social relationships, and identity. Explicitly engaged with the very technologies that he critiques, Davis's work viscerally confronts the viewer, inviting contemplation of the role new technologies play in mediating and reimagining our understanding of reality, corporality, and identity. His work has been exhibited at D!iverseWorks, the Blaffer Art Museum, Art League, Houston, Black Visual Arts Center, Alternatives, Chandler Gallery, and others. They currently live in Hanover, NH with their cat, Nocturne, where they are pursuing a PhD in computer sciences at Dartmouth.
